

## Hybrid Cloud Senior Consultant

Crawley, West Sussex, UK - Up to £75,000 (depending on skills) + Benefits

### Your new company

We're a vibrant technology solutions provider delivering transformation projects across the UK. Our excellent reputation has built us a diverse user base that uses our solutions to engage their customers, inspire their teams and deliver operational and technological resilience they can rely on. This can range from a small turnkey project to provide Office365 backup services all the way through to fully managing the AWS infrastructure for a SaaS platform.

Our hybrid cloud solutions are particularly well regarded and, as such, we're seeking engineers in this space with operational and technical expertise who will help to deliver a world-class experience across the hybrid cloud portfolio of services of physical infrastructure, data centre facilities and public cloud services.

The service delivery team each have 20+ years of technical delivery expertise over a range of verticals and disciplines and are all considered experts in their fields. We need more technical multi-role fighters who can pick up any system or technology quickly so we can solve our customers problems.

### Your new role

You'll join a team of highly experienced IT professionals and will report directly to our Head of Hybrid Cloud. You'll be tasked with designing, deploying and supporting a wide range of technical solutions. This is a heavily customer facing and hands-on role and you will be key to identifying new opportunities and designing the solutions we deploy, as well as supporting everything that has been deployed over the last two years.

You will be engaging stakeholders at all levels in our clients and delivering a wide variety of solutions to a broad set of industries / verticals.

### What you'll need to succeed

As the successful candidate you'll display a real passion for all technology across infrastructure and security. Everything we do in the Hybrid Cloud practice has security principles built in from the outset.

You will have a deep technical background with at least 5 years of experience designing, implementing and supporting infrastructure and this must cover physical as well as cloud infrastructure. Technologies you must have detailed knowledge of include:

- Storage systems
- X86 servers & virtualisation technology

- Backup and data protection technologies
- LAN & WAN network infrastructure
- Advanced TCP/IP networking knowledge
- Network security principles – firewalls, VPNs
- Public cloud services with a focus on AWS

Previous roles will ideally include operational management responsibility for a range of systems and people. Joining a small but rapidly expanding start-up team means there must be a 'whatever it takes' mindset as you may need to step in and support other team members to solve our customers problems. You must be organised and demonstrate some project management skills.

Your technical knowledge will be grown extensively in this role and we will support your development and learning. Certifications or hands on experience with any of the following vendors will improve your chance of success:

- AWS
- Rubrik
- Any HCI platforms
- Pure Storage
- Fortinet Fortigate
- Extreme Networks

### What you'll get in return

You'll be rewarded with salary of up to £75,000 + benefits and the rare opportunity to work in a client facing role, facing unique challenges. You'll be supported by a closely-knit management team and cutting-edge systems and technology.

You will be officially based in the Crawley office but flexible working is a must from both sides; we will need you to be in our Crawley offices on a regular basis but home working and travel to customer sites will also be a major part of the role.

### What you need to do now

If you're interested in this role, forward an up-to-date copy of your CV, or call us now. If this job isn't quite right for you but you are looking for a new position, please contact us for a confidential discussion on your career.
